

# NORTHWESTERN WISCONSIN GROUNDWATER MONITORING PROJECT

## Sample Collection Volunteers Wanted!

This project aims to generate much-needed data on naturally-occurring fluoride and selected metals in groundwater collected from within 11 northwest Wisconsin counties. A second objective of this research is to foster public awareness among northwestern Wisconsin residents about the need for regular private well water testing. Citizen scientists and northwestern Wisconsin residents using private well water are being called upon to participate in this project by providing drinking water samples. In return, volunteers will receive free well water testing for fluoride, and for some randomly-selected kits, the metals arsenic, iron, manganese, aluminum, and lead. To be eligible for a free well water testing kit you must use well water as your primary drinking water source and reside in one of the following counties: Douglas, Bayfield, Ashland, Iron, Burnett, Washburn, Sawyer, Price, Rusk, Barron, or Polk.
